Fire Suppression System

- The house has a glycol filled fire sprinkler system installed throughout. This system is connected to the domestic well with a back pressure sustaining valve.
- System should be inspected annually, refer to 3D Fire Protection Manual for specific inspection and maintenance requirements.

Fire Sprinkler Heads

- Located throughout the house in all rooms.
- The actual fire sprinkler head is concealed by the brown covers seen in the picture. (White covers in plaster work)
- The fire sprinkler heads are activated by heat from the fire.
- Only the heads that have sensed excessive heat will activate in the case of a fire.
